

Zoom In — Before Tomorrow's Class

Pre-work

Purpose

Tomorrow we will work on contextualising your project: starting from the broader social problem, zooming into your selected NGO, and then identifying a specific user and problem. This short pre-work is meant to get you thinking before class.

The Framing

BROADER PROBLEM SPACE → NGO CONTEXT → SPECIFIC USER & PROBLEM

Keep both levels in view: the broader problem is the larger social challenge you care about; the NGO context is where your semester project is situated. We are trying to identify a focused use case that can be demonstrated in that context.

Submission: Think through & attempt to answer these five questions

1. Zoom out — What is the broader problem space?

In 1–2 sentences, describe the broader social problem space you believe your project is addressing.

2. Zoom in — Where does this problem show up in the NGO context?

In 2–3 sentences, describe where the broader problem actually appears in your selected NGO's work. What does the NGO do? Which programme, activity, service, or setting is relevant? Where does it happen?

3. Zoom in further — Who is the specific user?

Identify the person who actually encounters the problem in this context. Name the primary user and briefly describe their role.

4. What difficulty does this user face?

Complete the sentence from the user's perspective:

Our user is trying to _____, but _____.

5. What is still an assumption?

Think back to your Sprint 0 work. Identify one important thing about the user, context, problem, workflow, or constraint that you still do not know for sure and would like to validate.

Keep in mind

- You do not need to choose a final solution before tomorrow's class. **Bring your thinking to class.**
- The NGO is the context in which you will work; the NGO itself is not necessarily the user.
